

‘Aromel’

This traditional favorite is a perpetual-fruiting variety that is still popular today. Moderate yields of medium to large, bright red, juicy fruits are borne over a long season in small flushes, and the berries produced have an outstanding flavor.

-  suitable for containers
-  early spring
-  some resistance
-  hardy
-  self-fertile
-  midsummer

‘Jewel’

This June bearer, bred for cold weather, produces large, wedge-shaped, bright-red fruits. The high-quality berries resist rot, but plants are susceptible to soil-borne fungi. Beds previously planted with strawberries should be avoided.

-  unsuitable for containers
-  early spring
-  some resistance
-  hardy
-  self-fertile
-  early summer

‘Tristar’

This day-neutral variety delivers a steady, all-season yield of deep-red, flavorful, medium-sized berries. Planted in containers, the disease-resistant, adaptable plants can be brought inside in fall to extend the berry season.

-  suitable for containers
-  early spring
-  good resistance
-  hardy
-  self-fertile
-  spring to fall
