

'Blanka'

This new, reliable variety produces the heaviest yields of all white currants over a long season. The large, almost transparent, ivory-white berries have the sweetest flavor and are borne on long strings that make picking easy.

-  suitable for containers
-  fall to early spring
-  good resistance
-  hardy
-  self-fertile
-  mid- to late summer

'White Imperial'

This old variety is popular for dessert use. Plants have a spreading habit, are resistant to mildew and white pine blister rust, and produce clusters of white, translucent fruits with a pink blush. Yields are moderate.

-  unsuitable for containers
-  early spring
-  good resistance
-  hardy
-  self-fertile
-  early summer

'Pink Champagne'

This cross between red and white currant produces beautiful, translucent, pink fruits known for their excellent taste. 'Pink Champagne' is recommended for home growing due to its resistance to leaf diseases.

-  unsuitable for containers
-  early spring
-  good resistance
-  hardy
-  self-fertile
-  early summer
