

GROWING IN SMALL SPACES

A flowerpot on a windowsill is all the space you need to grow a shallow-rooted plant such as a lettuce, so don't despair if you don't have much room to play with. Make the most of whatever space you have; create a raised bed in a compact garden, or plant flowerpots and containers for a patio, decking, or even a balcony. Be creative; grow crops such as tomatoes in hanging baskets, or grow fruit trees in tubs.

VERTICAL GARDENING

Don't feel limited to growing at ground level. If you have a large unused space, a backyard wall or sturdy fence, for example, consider fastening pots and baskets to it, and grow tiers of crops while using no floor space at all. Hanging baskets are an attractive and resourceful use of space, although be careful that they are mounted well enough to support their eventual weight. Not all plants will tolerate this relative lack of soil, but some, such as strawberries and salad greens, will thrive quite happily. Consider planting your crops in with other trailing plants; a mixture of tumbling tomatoes

Plant a basket of decorative tomatoes.

Grow a bowl of blackberries on your patio.

Fill a raised bed with salad greens.
