

'Trevor'

This F1-hybrid, Nantes-type variety produces heavy yields of cylindrical roots with a good orange color. The roots can be grown for early or later crop harvests and have a good, sweet flavor and good texture. The plants have good bolt resistance.

-  suitable for containers
-  mid-spring to late summer
-  some resistance
-  hardy
-  midsummer to fall

'Atomic Red'

This long, slim, Imperator-type carrot is a unique red-purple color that deepens when roots are cooked in stews or roasted, and offers higher lycopene levels than most other varieties. Best planted in loose soil, its roots grow to 11 in (28 cm) long.

-  unsuitable for containers
-  mid-spring to early summer
-  no resistance
-  hardy biennial
-  midsummer to fall

'Scarlet Nantes'

Known also as 'Nantes Scarlet', this classic orange-red carrot grows to about 8 in (20 cm) in length, and has a sweet, crisp taste and almost no inner core. The slightly tapered roots grow reliably well in a wide range of conditions.

-  unsuitable for containers
-  mid-spring to early summer
-  no resistance
-  hardy biennial
-  midsummer to fall
