

### 'Beauregard'

This vigorous variety is one of the fastest to mature, at 90 to 95 days, and is high-yielding. The roots have a red-coppery skin and moist, sweet, soft orange flesh. They are resistant to cracking, nematodes, and pox and they store well after harvesting.

not hardy

mid-fall

### 'Vardaman'

Released by the Mississippi Agricultural Extension Service in 1981, 'Vardaman' is known for producing small, deep orange roots with outstanding flavor. The plant grows in a compact bush form and has attractive foliage, making it an excellent choice for the ornamental garden.

some resistance

not hardy

late summer to early fall

### 'Nancy Hall'

This heirloom variety is a favorite of gardeners because of the sweet flavor and firm texture of its yellow flesh. The pale-colored roots do not have the disease resistance of the newer varieties, and are generally smaller. They keep well.

poor resistance

not hardy

late summer to early fall

### 'Vineless Porto Rico'

This vineless, or bush, variety is a favorite of gardeners with limited space. 'Porto Rico' roots have copper skin and reddish-orange flesh with a rich flavor and a smooth texture. An older variety, it is susceptible to fusarium wilt and Southern root knot nematodes.
