

'Snowball'

This old variety is a compact plant with medium-sized, tightly packed, snow-white heads. Frequently sown in late spring for a fall harvest, it can also be started indoors in late winter for a midsummer crop. It keeps well and is versatile in the kitchen.

-  unsuitable for containers
-  late winter to spring
-  poor resistance
-  not hardy
-  summer to fall

'Maystar'

After a late spring sowing, this hardy variety overwinters to mature in early summer the following year. An excellent flavor and texture make this a good all-purpose cauliflower for cooking or eating raw. The solid white curds freeze very well.

-  unsuitable for containers
-  spring
-  poor resistance
-  hardy
-  early summer

'Medallion'

This winter cauliflower produces a good crop early in the year following sowing. The large white curds form a round head with a full, rich flavor. Although hardy, it is less likely to overwinter well in very cold areas.

-  unsuitable for containers
-  early summer
-  poor resistance
-  hardy
-  spring
