

'De Cicco'

Early and extra-hardy, this Italian heirloom is a favorite of home gardeners, producing modest-sized central heads followed by a month or more of side shoots. Though less uniform than hybrids, 'De Cicco' can be more productive over the course of a season.

suitable for containers

mid- to late spring; midsummer

some resistance

fairly hardy

midsummer; fall

'Small Miracle Hybrid'

Uniquely compact, the 'Small Miracle' hybrid is a good container choice, producing small to medium size dark green heads that rise above the foliage of the 12-in (30-cm) plants. In a small garden they can be planted 8 in (20 cm) apart to optimize the space.

mid- to late spring; midsummer

good resistance

fairly hardy

midsummer; fall

'Waltham 29'

Developed in 1951 to withstand increasingly cold temperatures as it matures, this open-pollinated classic is good for fall planting and will not head properly if weather is too warm. Plants are stockier than most, and produce medium-sized heads and large side shoots.

mid- to late spring; midsummer

some resistance

fairly hardy

midsummer; fall

'Green Goliath'

This open-pollinated variety produces reliably large blue-green heads than tend to mature over time, rather than all at once, followed by three weeks of side shoots. Ready about 55 days after transplanting, it can be planted for spring or fall harvest.
