

'Bright Lights'

This handsome chard variety produces stems ranging in color from red to pink, purple, green, orange, and yellow, with large green or bronze foliage. Harvest as baby leaves 28 days after sowing, or when it reaches maturity in 50 to 60 days.

suitable for containers

mid-spring to late summer

poor resistance

fairly hardy

late spring to late fall

'Rhubarb Chard'

This heirloom variety (also known as 'Ruby Red') produces heavily puckered, red-veined, dark green or purple leaves on red stems. It is both beautiful and delicious. The stems have a slight asparagus flavor and the flower stalks can be cooked like sprouting broccoli.

suitable for containers

mid-spring to late summer

some resistance

fairly hardy

late spring to late fall

'Perpetual Spinach'

This variety has dull green stems with smooth, dark green leaves with small midribs, resembling spinach, but coarser. It is less likely to bolt than spinach and is hardier than other Swiss chards, making it easier to grow and suitable for a long harvest season.

suitable for containers

mid-spring to late summer

poor resistance

fairly hardy

late spring to early winter
