

'Opal'

A very hardy, vigorous, upright variety, 'Opal' bears heavy crops of dessert plums that mature early in the season. Inside the small, bite-sized, purplish-green fruits, the pale yellow flesh has a distinctly greengapelike flavor.

fairly hardy

self-fertile (mid)

early to midsummer

'Superior'

This Japanese-American hybrid was selected for fruit size, vigor, and cold-hardiness. It grows larger and faster than most, and bears red fruit with yellow flesh that is excellent fresh or in jams. Pollenize with Japanese plums or hybrids.

self-fertile (early)

late summer

'Wickson'

This Chinese-Japanese plum, hybridized a century ago, bears large, yellow-and-red fruits with tasty yellow flesh. Self-fruitful, it produces bigger crops when planted by a Japanese variety. Prone to mildew and brown rot.
