

Inspired by the success of the other hill railways, work on the connection from Pathankot in Punjab to Joginder Nagar in Kangra, in present-day Himachal Pradesh, began in 1925. Built initially to assist with freight for the Uhl hydroelectric project in 1928, the line opened for passengers in April 1929. While there are only two tunnels across the distance of about 195 km, the line has 993 bridges, 484 curves, and ascends at a gradient of 1 in 25. During World War II, portions of its track were removed to assist with the war effort and reconstructed in 1954.

▲ **The Kangra Valley Railway** passes through Joginder Nagar, a hill station near Palampur in Himachal Pradesh. This narrow-gauge line once carried heavy machinery shipped from Britain to the Shanan Power House, almost 2 km away from Joginder Nagar.
