

Compared to the DHR, the NRM climbs at a higher speed and on steeper grades. From Mettupalayam to Kallar, the railway uses a metre-gauge line to cross the plains. The rack system begins at Kallar on the way to Coonoor; this route has a steep section with 208 curves, 13 tunnels, and a staggering 27 viaducts, including the stunning Burliar Bridge and the Adderley Viaduct. The line was completed in 1908 and run by various companies till it was incorporated into the Southern Railway in 1951. The NMR is a UNESCO World Heritage Site and a part of the Mountain Railways of India.
