

Work plates from the Hubli Workshop (top) and the Parel Workshop (bottom)

Hubs of technology transfer

With railway lines came workshops; some provided basic support ideal for minor repairs, while others were massive units employing thousands of people that contributed to local economies and often resembled small colonies. Lahore had some of the largest workshops after [Jamalpur](#), employing about 4,000 workers around Naulakha city (in present-day Pakistan) in the early 1890s. With the expansion of the North Western Railway, the Mughalpura Workshop opened at the edge of Lahore.
