

LOCOMOTIVES

India's first electric suburban train ran from Bombay's Victoria Terminus (VT) to Kurla on the Great Indian Peninsula Railway's (GIPR) Harbour Line on 3 February 1925. A year before, in 1924, the Locomotive Standards Committee had updated and restandardized the previous British Engineering Standards Association (BESA) designs and established eight basic types of steam locomotive classes known as the Indian Railway Standards.
