

“RO-RO”

In the late 1990s, there was a slight decrease in the freight operations on the Indian Railways. As an innovative measure to improve the freight traffic, the Indian Government introduced the concept of the “Roll-On-Roll-Off” (RO-RO) service. Introduced on the Konkan Railways’ diesel route in 1999, this scheme involves rolling loaded goods trucks onto flat wagons and transporting them via rail to their destination. Over the years, the service has been extended to other territories. This multimodal service is fuel-efficient and has also helped in decongesting cities while easing the transportation process for truck operators with no detentions and less paperwork.
