

WDG-4

Year Introduced 1999

Manufacturer General Motors and Diesel Locomotive Works

Power Diesel-Electric

Gauge Broad

Wheel Arrangement Co-Co

The first WDG-4 locomotives were imported, some fully built, and others in kit form to be assembled in India. Compared to WDM-2, these locomotives have lower fuel requirements and maintenance cost. With 4,000 HP, they can achieve a maximum speed of 100 km/h and work well in steep terrain. In 2010, a modified version of this class, WDP-4B, was introduced for passenger service.
