

WAP-4

Year Introduced 1994

Manufacturer Chittaranjan Locomotive Works

Power AC Electric

Gauge Broad

Wheel Arrangement Co-Co

The WAP series was extensively used for passenger trains, of which WAP-4 is the most common. The 1990s were a period when the express trains were becoming common. The earlier WAP-1 were limited in their ability to haul trains with increased number of coaches. This class has been so successful that many units of WAP-1 and WAP-6 have been converted to WAP-4. The locomotives could run as fast as 140 km/h.
