

## **BRAKE VAN**

Usually, located at the end of a train, brake vans are a railway carriage or vehicle from which brakes can be applied by the train's guard.

## **BRANCH LINE**

Secondary rail line that branches off of a main line, usually to serve local stations.

## **BALLAST**

The bed of stone or gravel on which a railway track is laid.

## **BO-BO**

A common axle configuration that describes a locomotive that has two groups of twin-set powered axles.

## **CHIMNEY**

Opening in the top of the smokebox through which exhaust gases and steam escape. Also called a smokestack or stack.

## **CO-CO**

A common axle configuration that describes a diesel or electric locomotive that has two triple-sets of powered axles.

## **COMPOUND LOCOMOTIVE**

Steam locomotive that uses two sets of cylinders, where the second one is powered by exhaust steam from the first.

## **CONNECTING ROD**

A connecting rod links the piston rods to the crankpins of the drive wheels in a steam engine.

## **CONTAINER**

Standardized metal freight box that can be packed with goods, sealed, and then transported by specially adapted trains. Containers are
