

priority and ran with high speed to enable quick delivery of mail.

MAIN LINE

An important rail line, often running between major towns or cities.

MONORAIL

Railway system based on a single rail.

MULTIPLE UNIT (MU)

A term used in diesel and electric traction that refers to the semi-permanent coupling of several powered and unpowered vehicles to form a single train.

PASSENGER TRAIN

A train with cars intended to transport people. These trains travel between stations at which passengers may embark or disembark.

RACK RAILWAY

A railway with an additional toothed rack-rail. A train or locomotive running on the railway is equipped with a cog that has lines with the teeth on the rail, enabling it to climb slopes that would not be possible for a normal train.

REVERSER

Mechanism with a wheel or lever that controls the forward and reverse motion of a steam locomotive.

ROLLING STOCK

A collection of vehicles that is run by the railways, such as locomotives, carriages, and wagons.

ROUTE KILOMETRE

Distance between two points on the railways irrespective of the number of lines connecting them.
