

RUNNING BOARD

Footway around a locomotive's engine compartment or boiler.

RUNNING GEAR

Parts that are involved in the movement of an engine, including wheels, axles, axleboxes, bearings, and springs.

SADDLE TANK

Tank locomotive that has the water tank mounted on top of its boiler.

SAFETY VALVES

Relief valves in a steam locomotive boiler. These are set to lift automatically, to allow steam to escape in case the boiler pressure exceeds the set limit.

SALOON

Luxurious rail carriages that were typically used by high-ranking people and royalty for travel. They often had a lounge, and private accommodations.

SIGNAL

Mechanical or electronic fixed unit with an arm or a light that indicates whether a train should stop, go, or use caution.

SLEEPER

Coach or train with beds for passengers on overnight or long-distance journeys. The term also refers to the lateral item that keeps two rails apart at a fixed distance. Sleepers were earlier made of wood, but were later followed by tie-rod sleepers, steel trough sleepers and finally by concrete sleepers on the Indian Railways. Today, all main lines of the Indian Railways use concrete sleepers.

SMOKEBOX

Leading section of a steam locomotive boiler assembly that houses the main steam pipes to the cylinders, the blastpipe, the stack, and the
