

# Dinosaurs

## Ornithischians

*Heterodontosaurus* was one of the first bird-hipped dinosaurs. It lived about 205 mya.

*Corythosaurus* had a tall crest on its head.

*Iguanodon* could walk on two or four legs.

*Styracosaurus* was a short-frilled ceratopsian.

Spiky tail for defence

Body built for speed

*Hypsilophodon* was once thought to have lived in trees, but its limbs were not built for climbing.

*Stegoceras* was a pachycephalosaur, and had a thick-domed skull.

*Stegosaurus* was the largest stegosaur at 9 m (30 ft) long. It had large plates along its back.

*Scelidosaurus* was the oldest-known armoured dinosaur.

*Euoplocephalus* had body armour and a tail club to protect it against attack.

Stiff tail helped with balance.

*Deinonychus* was a meat eater and may have hunted in packs.

## Saurischians

*Gallimimus* was shaped like an ostrich and was one of the fastest running dinosaurs.

Toothless beak

*Dilophosaurus* had two high crests on top of its large head.

Tail was used for balance at speed.

Whiplash tail used in defence.

Hands could be used to grasp food.

*Anchisaurus* may have eaten both meat and plants.

Long foot bones increased the length of the leg.

Ankle joint

Long, clawed fingers

Flat, crocodile-like jaws

Long neck enabled *Barosaurus* to reach leaves at the top of trees.

*Baryonyx* had a huge 30-cm (12-in)-long claw on each hand.

Dagger-like teeth

Body like *Archaeopteryx*, the first bird

Two clawed fingers on each hand

*Compsognathus* was small – only 74 cm (2.5 ft) long.

*Herrerasaurus* was a carnivore that lived in Argentina 228 mya.

*Barosaurus* resembled *Diplodocus*. It was about the same size with a shorter tail and longer neck.

Large hind legs were needed to bear the weight of the body.

Small arms with two-fingered hands

*Tyrannosaurus* was one of the largest known land-living carnivores, weighing up to 6 tonnes.
