

Farming

Animals farmed for produce

Chickens are bred for eggs and meat.

Peacocks are bred for their exotic plumage.

Ducks are farmed for feathers, eggs, and meat.

Sheep are bred for milk, meat, skins, and wool.

Geese are kept for meat, down, and eggs.

Red deer are bred for their meat, called venison.

Jerseys are farmed for their very rich milk.

Cattle are the world's most numerous farm animals.

Cattle are farmed for milk and meat.

Herefords were first bred in Britain and are now farmed in 50 countries.

Angora goats have a coarse undercoat and a curly wool outer coat.

Goats are farmed for milk, meat, and wool.

Ostrich chick: farmed for meat and feathers.

Goats can feed on scrubby grass and thorny branches.

Udders

Saanen goats are bred in Europe for their milk.

Now scarce in the wild

Chinchillas, rodents bred for their soft, delicate fur.

Pigs are versatile feeders.

Almost every part of a pig can be eaten.

Pigs are farmed for pork, bacon, other meat products, skins, and bristles.

Animals bred to work

Camels are used as pack animals, and also farmed for wool, milk, hides, and meat.

Well-muscled leg

Heavy horses, used where a farmer has no tractor.

Long, erect ears

Donkeys carry large loads on little food or water.

Poitou donkeys are the world's largest.

Mules are interbred from horses and donkeys.

Elephants pull heavier loads than any other animal.

Elephants are used as draught (pulling) animals in southeast Asia.
