

5 Get drawing

To draw your pet, add these instructions above the last two lines of code. There's a separate command for each body part. The numbers, called coordinates, tell **Tkinter** what to draw and where to draw it.

Storing the body colour in the variable `c.body_color` means you don't have to keep typing in 'SkyBlue1'.

```
c.configure(bg='dark blue', highlightthickness=0)
c.body_color = 'SkyBlue1'
body = c.create_oval(35, 20, 365, 350, outline=c.body_color, fill=c.body_color)
ear_left = c.create_polygon(75, 80, 75, 10, 165, 70, outline=c.body_color, fill=c.body_color)
ear_right = c.create_polygon(255, 45, 325, 10, 320, 70, outline=c.body_color, \
                             fill=c.body_color)
foot_left = c.create_oval(65, 320, 145, 360, outline=c.body_color, fill= c.body_color)
foot_right = c.create_oval(250, 320, 330, 360, outline=c.body_color, fill= c.body_color)

eye_left = c.create_oval(130, 110, 160, 170, outline='black', fill='white')
pupil_left = c.create_oval(140, 145, 150, 155, outline='black', fill='black')
eye_right = c.create_oval(230, 110, 260, 170, outline='black', fill='white')
pupil_right = c.create_oval(240, 145, 250, 155, outline='black', fill='black')

mouth_normal = c.create_line(170, 250, 200, 272, 230, 250, smooth=1, width=2, state=NORMAL)

c.pack()
```

These pairs of coordinates define the start, mid-point, and end of the mouth.

In the code, "left" and "right" refer to the left and right of the window as you look at it.

The mouth is a smooth line, 2 pixels wide.

EXPERT TIPS

Tkinter coordinates

The drawing instructions use x and y coordinates. In **Tkinter**, the x coordinates start at 0 on the left and increase as you move across the window, until they reach 400 on the far right. The y coordinates start at 0 at the top. They get bigger as you move down, until they reach 400 at the bottom.

Coordinates are written as pairs, with the x coordinate first.

6 Run it again

Run the program again and you should see Screen Pet sitting in the middle of the **Tkinter** window.
