

Python in action

Python isn't just an educational tool. It's such a powerful program it's used for many interesting and exciting tasks in business, medicine, science, and the media. It can even be used to control the lights and heating in your home.

▽ Crawling the web

Python is widely used on the Internet. Parts of Google's search engine are written in Python. Much of YouTube is also built using Python code.

I'm a mighty powerful program!

Don't worry, this won't hurt – much!

Python? It's a serious business!

△ Serious business

Python helps banks to keep track of the money in their accounts, and big store chains to set the prices of the goods they sell.

△ Medical marvels

Python can be used to program robots to perform tricky operations. A Python-programmed robot surgeon can work more quickly than a human one, and be more accurate and less likely to make errors.

△ Out of this world

Software engineers used Python to create tools for NASA's Mission Control Centre. These tools help the crew prepare for and monitor the progress of each mission.

EXPERT TIPS

The interpreter

Some programming languages use an interpreter. The interpreter is a program that can translate from one programming language into another. Every time you run a Python program, the interpreter translates each line of Python code into a special code that the computer can understand, known as machine code.

Action!

△ In the movies

Disney uses Python to automate repetitive parts of the animation process. Rather than animators carrying out the same steps over and over, they use a Python program to repeat the steps automatically. This saves work, shortening the time it takes to make a film.
