

Getting started

In the first part of the project, you'll set up the graphical user interface (GUI) and add the pairs of symbols that will be hidden by the buttons.

1 Create a new file

Open IDLE. Create a new file and save it as "matchmaker.py".

2 Add modules

Now type this code at the top of your file to import the modules you need for this project. You'll use **random** to shuffle the symbols, **time** to pause the program, and **Tkinter** to create the GUI.

3 Set up the GUI

Under the import commands, add this code, which will set up the GUI. The **root.resizable()** function prevents the player from resizing the window. This is important, since changing the size of the window will mess up the button layout that you'll create later on.

4 Test your code

Now run the code. You should see an empty **Tkinter** window with the heading "Matchmaker". If you can't see it, it's probably hidden behind other windows.

DISABLED stops a button from responding after its symbol has been matched.

```
import random
import time
from tkinter import Tk, Button, DISABLED
```

Button creates the buttons in the **Tkinter** window.

These lines create a **Tkinter** window and give it a title.

```
root = Tk()
root.title('Matchmaker')
root.resizable(width=False, height=False)
```

This line keeps the window at its original size.

Don't forget to save your work.
