

Robot Builder

Creating graphics in Python is easy. Python's `turtle` module lets you move a robot "turtle" around the screen, drawing pictures with a pen as it goes. In this project, you'll program the turtle to build more robots – or at least pictures of robots!

What happens

When you run the program, Python's `turtle` sets off, scuttling around the screen as it draws a friendly robot. Watch as it assembles the robot piece by piece, using different colours.

You can change the robot's colour scheme to whatever you fancy.

Customize your robot by altering the size of the rectangles that make up its body parts.
