

Hacks and tweaks

Now your project is up and running, here are some ideas for modifying the code so you can customize the robots you build.

▽ Change the colours

The robot you've created is fairly colourful, but there's definitely room for improvement. You could change the code to build a robot that matches the colours of your room or your favourite football team's shirt, or create one that's totally multicoloured! On the right are some colours the turtle recognizes.

	Lawn Green		Seashell		Blue
	Purple		Light Blue		Yellow
	Goldenrod		Hot Pink		Thistle

▷ Change the face

You can change the expression on the robot's face by rearranging its features. To give it wonky eyes and mouth, use the code on the right.

eyes

```
t.goto(-60, 160)
rectangle(30, 10, 'white')
t.goto(-60, 160)
rectangle(5, 5, 'black')
t.goto(-45, 155)
rectangle(5, 5, 'black')
```

This line moves the robot's right pupil, so it looks like the robot is rolling its eyes.

mouth

```
t.goto(-65, 135)
t.right(5)
rectangle(40, 5, 'black')
```

The turtle turns right slightly, which makes the mouth slope.
