

▷ A helping hand

Add this code to give your robot U-shaped gripping hands. You can reshape the hands to look like hooks, pincers, or anything else you like. Let your imagination run wild and create your own version!

```
# hands
t.goto(-155, 130)
rectangle(25, 25, 'green')
t.goto(-147, 130)
rectangle(10, 15, t.bgcolor())
t.goto(50, 130)
rectangle(25, 25, 'green')
t.goto(58, 130)
rectangle(10, 15, t.bgcolor())
```

Draw a green square for the main part of the hand.

Draw a small rectangle in the background colour to give the grip shape.

All-in-one arms

Drawing the arms in several parts makes it awkward to change their position or to add extra arms. In this hack, you'll write a function that draws an arm all in one go.

Create an arm function

First add this new function, which draws an arm shape and gives it colour.

```
t.end_fill()
t.penup()

def arm(color):
    t.pendown()
    t.begin_fill()
    t.color(color)
    t.forward(60)
    t.right(90)
    t.forward(50)
    t.right(90)
    t.forward(10)
    t.right(90)
    t.forward(40)
    t.left(90)
    t.forward(50)
    t.right(90)
    t.forward(10)
    t.end_fill()
    t.penup()
    t.setheading(0)
```

This line colours in the shape formed by the following moves.

Set the colour.

The turtle follows these commands to draw the arm.

Stop colouring in the shape.

Reset the turtle so it's facing right again.
