

You can choose whatever background colour you want, but the stars will probably look best on a strong, dark colour like this blue.

The turtle (the yellow arrowhead) is still drawing this star. When the star is complete, Python will fill it with colour.

I'm seeing stars!

Every star is drawn in a random location.

A new colour is selected for each star using three random numbers.

You can use the code to change each star's size and number of points.

◁ Screenful of stars

The starry night project will draw stars one by one, but because it uses an infinite `while` loop it will draw stars forever! You can change the size range of the stars by adjusting the limits on the random numbers in the code.
