

Understanding the benefits

In Charles Darwin's famous theory of evolution, survival depends on an ability to change. Those species that do not adapt and change to cope with an altering environment simply die out. The same can be said to be true of business organizations as well.

Innovating to survive

If you do not change what you create and offer the world (your products and services), you run the risk of being pushed aside by organizations that do. And if you want your businesses to grow, you are unlikely to achieve this if you do not offer new products and services in new ways. This survival idea may be obvious in a competitive business world—but it is just as important in nonprofit organizations and public services.

NOVELTY IN PROCESS

**A faster, cheaper,
or more efficient
production process
gives you an instant
advantage.**

ADDED COMPLEXITY

**Offering something
too complex for
others to imitate
places your product
at a premium.**

RIGHT TIMING

**Getting into a market
early establishes your
brand before the
competition has time
to develop.**
