

This archaeologist holds the remains of *Homo erectus*, which dates from about 1 million years ago, and was found on this site. The first modern humans in China occupied this site by about 40,000 years ago.

The earliest finds in Australia come from Lake Mungo. Tourists today visit a landscape of strange formations where over 20,000 years ago there was a lake and much human activity. Stone tools and animal bones found in the area have shown us much about the first Australians.

Klasies River Mouth Caves in South Africa were occupied by hunter-gatherers c. 120,000 years ago and have revealed some clues about how they lived. Some of the earliest known remains of *Homo sapiens* were found in the caves.

The cave paintings of Altamira date from about 15,000 years ago and are famous for their dramatic representations of bison, boar, and red deer in charcoal and earth pigments by people of the Magdalenian (Paleolithic) culture of southern Europe.

This mammoth bone carving found at Dolní Vestonice was made by hunters between 28,000 and 22,000 years ago.
