

## Douglas DC-2

The Douglas DC-1 was quickly superseded by the improved DC-2, which had a better single-engined performance than any of its competitors. The first was delivered to TWA in May 1934, who were eventually to operate 32 DC-2s. The type was flown by airlines worldwide, and also by the US Army and Navy with some 220 being built. One of the early customers was the Dutch airline KLM which decided to enter a standard machine in the 1934 MacRobertson England-to-Australia Air Race. With three passengers and 30,000 airmail letters, the DC-2 came second, only beaten by the specialized, high-speed racer, the D.H.88 Comet.

## Farman F.60 Goliath

Like many of the early airliners, the Goliath was originally designed as a bomber but appeared too late for operational service. Servicing many European airlines, the 12 passengers were carried in two compartments, four forward of the open-crew cockpit and eight behind. In 1919, a Goliath set a world load-to-height record reaching 16,732ft (5,100m) with 25 passengers.

## Focke-Wulf Fw 200 Condor

Designed in 1936 by Professor Kurt Tank to meet a Lufthansa specification for a long-range airliner, the prototype V1, powered by four Pratt & Whitney radial engines, first flew in July 1937. The two subsequent prototypes, V2 and V3, were fitted with BMW engines. The V1 prototype, named *Brandenburg*, flew nonstop from Berlin to New York in August 1938 in 24 hours 55 minutes, returning in less than 20 hours. Although used commercially by both Lufthansa and the Danish airline DDL, the Kondor is better known as a Luftwaffe maritime reconnaissance bomber.

## Fokker F-10 Super Tri-motor

By the late 1920s, Fokker was the world's largest aircraft manufacturer, and its name was synonymous with safety and reliability until one accident in 1931 changed all that. The first F-10 Super Tri-motor appeared in April 1927 and was operated by many leading airlines, including Pan American and TWA. On March 31, 1931, a TWA F-10 crashed in a thunderstorm. The accident gained widespread publicity since one of the victims was the renowned coach of the Notre Dame football team. The F-10 was immediately grounded, and Fokker's reputation was ruined.

## Handley Page H.P. 42

One of the largest biplanes ever built, the four-engined H.P. 42 already looked old-fashioned when it joined Imperial Airways in June 1931. Compared with the competition's sleek monoplanes, the H.P. 42 was derided for having its own "built-in headwind." Only eight were built, but their reputation for comfort, reliability, and, above all, safety, meant that only the outbreak of war curtailed their use. During their service life on European and Empire routes, the fleet flew over 6,200,000 miles (10,000,000km).

| <b>PASSENGERS</b> 38                                              |                                |

## Junkers F 13

Using the Junkers all-metal corrugated structure with a cantilever monoplane wing, the F 13 was a very advanced design when it first flew in June 1919. It was the first commercial aircraft to be equipped with passenger seat belts. When production ceased in 1932, around 450 had been manufactured in some 60 different variants, including float and ski versions. The aircraft was flown by many major airlines worldwide.
