

THE MIGHTY HINDENBURG

The LZ 129 Hindenburg sits in its hangar in Rhein-Main, Frankfurt, Germany. Designed to revolutionize passenger travel, this mighty airship was the largest man-made object ever to fly. Measuring 804ft (245m) long and 135ft (41m) in diameter, it could carry up to 72 passengers and around 60 crew members. With its fiery destruction in May 1937, the age of the zeppelins came to an end.
