

LEAVING THE HANGAR

A group of workmen walk out the German airship LZ 127 Graf Zeppelin from its hangar. Having first flown on September 18, 1928, it went on to become the most successful passenger airship ever built, clocking up 590 flights.

COVERING THE SKELETON

Here the outer fabric of the Graf Zeppelin is being fitted onto its framework at the Zeppelin factory in Friedrichshafen, Germany.

The huge gas cells inside the metal-and-fabric frame held 7,062,100 cubic ft (199,857 cubic meters) of hydrogen.
