

MULTIROLE

The Eagle was designed as a pure fighter-interceptor, but as a multirole aircraft is better value for money. A two-seater version, the F-15E, was developed for ground attack and as a low-level penetration bomber.

EAGLE PILOT

A formation of F-15Es head home after a training sortie. The pilot is wearing full flying gear with hard helmet and oxygen apparatus. Advanced radar provides high-resolution, ground-mapping data on the HUD and allows pilots to identify targets clearly at great distances.

BUBBLE COCKPIT

The F-15 designers created a bubble cockpit canopy for superb all-around vision, with innovative head-up display (HUD), and "hands on throttle and stick" (HOTAS) systems. These design innovations have since become standard on all modern fighters.

SUPERIOR FIGHTER

Time and again the Eagle has proved itself supreme as an air superiority fighter. The Israelis used it to devastating effect against the Syrians in 1982, and F-15Cs recorded most of the air-to-air kills in the 1991 Gulf War.
