

PROTOTYPE IN PRODUCTION

Under construction here is the first Caravelle prototype (completed in 1955). In the background is the nose, and various other parts, of the second prototype.

SIMILAR STYLINGS

Because the British de Havilland company gave Sud-Est access to information about its Comet, the Caravelle has a very similar flight deck layout (and an identical nose section) to the British airliner. The Caravelle's instrumentation is obsolete in modern airliners.

ENGINES AT THE BACK

The Caravelle was the first airliner with its engines in pods at the rear of the fuselage. This had a number of advantages: it left the wings uncluttered, reduced noise inside the passenger cabin, and limited fire risk by placing the engines far from the fuel tanks.

Specifications (Caravelle 12)

ENGINE 2 x 14,500lbst (6,577kcp) Pratt & Whitney JT8D-9 turbofan	
WINGSPAN 112ft 6in (34.3m)	
LENGTH 118ft 9in (36.2m)	
WEIGHT 70,110lb (31,800kg)	
CRUISING SPEED 487mph (785kph)	
CREW 2 (plus 4 cabin crew)	PASSENGERS 140

LONGER MODEL

Sud Aviation became part of Aérospatiale in 1970, and this was the company that built the last version of the airliner, the Caravelle 12 (shown here). The Caravelle 12 is a stretched model able to carry more passengers than previous models. It also has more powerful engines.
