**JOINT EFFORT**

Each Concorde was jointly built by the British Aircraft Corporation (now British Aerospace) and Aérospatiale. For example, the British made most of the fuselage and the vertical tail; the French made the wings and control surfaces.

Captain's side

ROOM FOR ONE MORE

While the usual Concorde flight crew numbered three (the pilot, co-pilot, and another person behind the pilots looking after the systems-management panel), there was space for a fourth member, also behind the pilots. Despite the impressive technology that went into Concorde, the cockpit looks oddly antiquated.

**CAREFUL INSPECTION**

After the crash near Paris in 2000 (where all 109 on board, plus four on the ground, were killed), Concorde maintenance came under close scrutiny. Modifications were also made, including improved tires and the addition of a Kevlar-based lining to strengthen the fuel tanks.

**BUILT FOR SPEED**

Everything about Concorde was optimized for high-altitude supersonic flight, including the elegant delta wing, the narrow fuselage, and the high-powered Rolls-Royce/SNECMA Olympus turbojet engines. The unavoidable consequences of this approach were relatively little room to carry passengers or cargo and high levels of engine noise and pollution.

Specifications

ENGINE 4 x 38,050 lb (17,259 kg) thrust reheat Rolls-Royce/SNECMA Olympus 593 Mk.610 turbojet

WINGSPAN 83 ft 10 in (25.56 m)

LENGTH 202 ft 4 in (61.7 m)

WEIGHT 174,750 lb (79,265 kg)

TOP SPEED 1,354 mph (2,179 kph)

CREW 3

PASSENGERS 128
