ON-BOARD SHOP

The aft main cabin area shown here is used as an in-flight shop. Individual airlines specify the interior layout that suits their needs.

Cabin lighting that simulates sunset and sunrise

Maximum of four seats in a row

LUXURY TRAVEL

With a floor area of 3,350 square ft (310 square meters), the A380 is usually configured to provide comfortable seating for about 550 passengers.

COCKPIT

The two-man flightdeck is deliberately conservative, maintaining many common features with earlier Airbus models, including the Honeywell flight management system. As pilot Captain Jacques Rosay said after the superjumbo's maiden flight: "Any Airbus pilot will feel immediately at ease with this aircraft."

ENGINES AND WHEELS

The Trent 970 has the largest fan diameter of any Rolls-Royce engine. It underwent many subtle modifications to meet targets for noise reduction. The A380 has 22 wheels: two six-wheel bogies make up the body landing gear and two four-wheel bogies the wing landing gear, plus two wheels at the nose.
