

Being a scientist

Scientists study the world around us. They look for gaps in existing knowledge and try to find the answers. Not all scientists study the same things—they specialize in different areas.

Testing, testing

Scientists explore their ideas and theories using tests called experiments. In this book, there are lots of experiments you can try out for yourself.

Experiments can involve toxic fumes or chemicals that might explode, so scientists wear protective goggles.

Mixing it up

Experimenting with chemicals and their reactions can produce some mixed results. Some mixtures can be dangerous, while others can be the answer the scientists are after.
