

The living world

Our amazing world is filled with millions of species, or types, of living thing.

They can be as big as elephants or so small that you have to look through a microscope to see them.

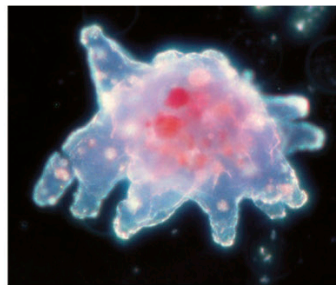

Spider

Dragonfly

Animals

The animal kingdom is made up of vertebrates (animals with a backbone) and invertebrates (animals without a backbone).

Microorganisms

Microorganisms are very tiny—each of them is made up of a single cell. This amoeba has been magnified more than 100 times.

Coral reef, home to a variety of living organisms

Mammals, birds, reptiles, amphibians, and fish are vertebrates.

Deer

Sunflower
