

Snake

Insects, such as butterflies, are invertebrates.

Plants

Plants cannot move around like animals. To survive and grow, they have to make their own food. Plants provide food for many animals and fungi, too.

Signs of life

Living things share some characteristics. They all need food and water. They also grow, reproduce, and adapt to their environment.

Fungi

Fungi (like toadstools, mushrooms, and molds) are neither plants nor animals, but they're more like plants than animals.

Fungi

Tree frog
