

Big molecules

In natural substances like vegetable oil, the atoms are often joined in chains to make very large molecules. The molecules in sunflower oil contain 50 atoms each.

weird or what?

An atom is mostly empty space. If an atom were the size of a sports stadium, the nucleus would be the size of a marble in the middle.

The mighty atom

When the nucleus of an atom is split, it releases a huge amount of energy. Nuclear bombs use this “atomic energy” to create violent explosions. Nuclear power plants use the energy to produce electricity.

The explosion of a nuclear bomb can create a spectacular “mushroom cloud.”
