

Electricity

Have you ever thought about what powers your television, your computer, or the lights in your bedroom? A flow of electricity makes all these things work.

Power supply

Electricity travels to your home along wires above and sometimes below the ground. The wires above the ground hang on metal towers.

Making electricity

Electricity is a form of energy. It can be made using any source of energy, such as coal, gas, oil, wind, or sunlight. On a wind farm, wind turbines use the energy of moving air to create electricity.

Everyday electricity

We use electricity in all sorts of ways in our everyday lives.

Electricity is used to **heat** up household appliances such as irons and stoves.

Electricity is used to **light** up our homes, schools, offices, and streets.

Electricity helps in **communication** by powering telephones and computers.

Electricity helps in **transportation** by powering certain vehicles, such as trains.
