

▷ Sud-Ouest SO30P Bretagne 1945

Origin France

Engine 2 x 2,400 hp Pratt & Whitney R-2800-CA18 air-cooled 18-cylinder radial

Top speed 263 mph (422 km/h)

Designed during WWII by a group of designers based at Cannes after the invasion of France, this all-metal transport aircraft was operated both as an airliner and a troop carrier; 45 were built.

△ Douglas DC-6 1946

Origin USA

Engine 2 x 2,400 hp Pratt & Whitney R-2800-CB16 "Double Wasp" air-cooled 18-cylinder radial

Top speed 315 mph (507 km/h)

Planned as a WWII military transport, the DC-6 was ideal for use on long-range commercial flights and 804 were built. Some of these machines are still flying on wildfire control, cargo, and military missions.

△ Avro Type 689 Tudor II 1946

Origin UK

Engine 4 x 1,770 hp Rolls-Royce Merlin 100 liquid-cooled V12

Top speed 320 mph (515 km/h)

Based on the Lancaster bomber, Britain's first pressurized airliner was stretched 25 ft (7.62 m) and widened 1 ft (30 cm) to take 60 passengers instead of 24, making it Britain's biggest, in this rare Tudor II form.

△ Avro 652A Anson C19 Series 2 1946

Origin UK

Engine 2 x 385 hp Armstrong Siddeley Cheetah XVII 7-cylinder radial

Top speed 188 mph (303 km/h)

First introduced in 1936, 11,020 Ansons were built, being used for many roles from maritime reconnaissance to aircrew training. The RAF used C19s for communications and transport during WWII.

▷ Brequet 761 "Deux-Ponts" 1949

Origin France

Engine 4 x 2,020 hp Pratt & Whitney R-2800-B31 air-cooled 18-cylinder radial

Top speed 242 mph (389 km/h)

Design began on the capacious double-deck 761 in 1944, before WWII ended. It had an elevator between the two decks. Although rapidly outdated and just 20 were built, it had an excellent safety record.

△ Antonov An-2 1947

Origin USSR

Engine 1,000 hp Shvetsov ASh-62IR 9-cylinder supercharged radial

Top speed 160 mph (258 km/h)

A utility/agricultural aircraft with an incredible 45-year production run, the slow-flying An-2 proved remarkably rugged and able to operate out of small airfields. More than 18,000 were built.

▷ Bristol Brabazon Mk1 1949

Origin UK

Engine 8 x 2,650 hp Bristol Centaurus air-cooled 18-cylinder radial

Top speed 300 mph (482 km/h)

This super-luxury plane needing extra-long runways was not what the market wanted; just one was built. It had the first all-powered flying systems, electric engine controls, and high-pressure hydraulics.

△ Sud-Est SE2010 Armagnac 1949

Origin France

Engine 4 x 3,500 hp Pratt & Whitney R-4360-B13 Wasp Major air-cooled 28-cylinder radial

Top speed 308 mph (495 km/h)

One of the largest civil aircraft built at the time, its huge fuselage was designed for three-tier sleeping but was never used in that format. Underpowered with limited range, just nine were built.
