

The 1950s

The jet age came into its own in the 1950s with the setting of new speed records and the introduction of the first jet airliner in 1952, the de Havilland Comet 1. By the end of the decade the first daily transatlantic crossings were available to a growing number of flyers. In 1958 Pan Am went into competition with BOAC's Comet 4 for the transatlantic market with its Boeing 707 fleet. Sophisticated electronic control and navigation systems made flying a much safer activity than ever before.
