

THE EXTERIOR

With its graceful, dolphin-shaped fuselage and broad sweeping wing, the Super Constellation was an elegant airliner. Of all-metal construction, it is powered by four 3,250 hp Wright R-3350s 18-cylinder twin-row radials turning three-blade Hamilton-Standard hydromatic propellers. The engine's exhaust systems were fitted with Power Recovery Turbines, which increased power output by directing the exhaust gases through a three-stage turbine. The distinctive triple-fin tail design was chosen as it provided adequate directional stability while keeping the aircraft's overall height within the limits set by the hangars of the time.

1. Weather radar radome 2. Radio antenna 3. Nosewheel steering rams 4. Lufthansa logo 5. Airspeed indicator pitot 6. Undercarriage wheel-well 7. Hamilton-Standard hydromatic propellers 8. Cowl flap 9. Aft section of engine nacelle 10. ILS aerial 11. Mainwheel disk brake 12. Main undercarriage shock absorber 13. Rotating beacon 14. Emergency exit 15. Tailplane fairing, designed to minimize aerodynamic drag 16. Power-boasted rudder
