

◁ **Fokker F27-100
Friendship 1958**

Origin Netherlands

Engine 2 x 2,250 hp Rolls-Royce
Dart Mk528 turboprop

Top speed 282 mph (454 km/h)

In the early 1950s, a number of aircraft manufacturers were planning a replacement for the DC-3, and Dutch airframer Fokker opted for a high-wing turboprop design. Called the F27, it was also produced in the US by Fairchild and would eventually become the bestselling Western turboprop airliner.

△ **Douglas DC-8 1959**

Origin US

Engine 4 x 17,000 lb (7,711 kg) thrust
Pratt & Whitney JT3-D turbofan

Top speed 588 mph (946 km/h)

Although Douglas dominated the American airliner market in the 1950s, Boeing got its 707 to market first. However, in many respects the DC-8 was better designed (for example, it had six-abreast seating from the start, whereas the 707 had to be redesigned). More than 500 were built. A handful are still in operation as freighters.

△ **Ilyushin Il-18 1959**

Origin USSR

Engine 4 x 4,250 hp Ivchenko
AI-20M turboprop

Top speed 419 mph (675 km/h)

First flown in 1957, the Il-18 (known to NATO as the "Coot") soon earned a reputation for being an extremely rugged and durable aircraft, capable of operating from unpaved airfields. Many Il-18s remain operational in Africa.

△ **Handley Page Dart
Herald 1959**

Origin UK

Engine 2 x 1,910 hp Rolls-Royce
Dart Mk527 turboprop

Top speed 275 mph (442 km/h)

The Herald was another contender for a "DC-3 replacement," but Handley Page's board made an error of judgment by initially specifying that it should be powered by piston engines, not turboprops.

△ **Vickers Viscount 1953**

Origin UK

Engine 2 x 1,990 hp Rolls-Royce
Dart Mk525 turboprop

Top speed 352 mph (566 km/h)

The first turboprop airliner to enter service, the Viscount was a quantum jump in air transport design. It was particularly popular with passengers, who loved the large windows, smooth ride (flying above most of the weather), and quiet cabin.

△ **Antonov An-12 1959**

Origin USSR

Engine 4 x 4,000 hp Progress AI-20M turboprop

Top speed 482 mph (775 km/h)

Sometimes described as "the Soviet C-130," the An-12 Cub is a tactical transport that is similar in both design and construction to its capitalist counterpart, the Lockheed Hercules. First flown in 1957, more than 1,200 were built and many still remain in service as freighters, particularly in Africa, India, and the former states of the USSR.
