

ENGINE SPECIFICATIONS

Dates produced	1959-2005
Configuration	Twin-spool turbofan
Fuel	Jet fuel
Power output	23,800 lb (106 kN) thrust
Weight	3,960 lb (1,796 kg) when dry
Compressors	3 low pressure, 8 high pressure
Turbines	2 low pressure, 2 high pressure
Combustor	Annular, featuring vaporizers

► See Jet engines pp.304-305

Oil cooler

The aircraft's fuel is used as a coolant to control the oil temperature.

Alternator cooling pipes

Uses bleed air from the fan case.

Fuel control unit

Drive quill

Exhaust from alternator

AC generator

Fuel pipe

Cooling air supply
Connected to rotation bearing.

Bleed air pipe

High-energy ignition units

Turbine casing

Fireproof bulkhead

Nozzle flange

Oil pipe

Nozzle vane

Engine breather pipe

Joint between low-pressure and high-pressure compressor sections

Case stiffening and blade-containment hoops

Fan intake casing
