

#### ◁ EWR VJ 101C 1963

**Origin** Germany

**Engine** 6 x 2,750 lb (1,247 kg) thrust  
Rolls-Royce RB145 turbojet

**Top speed** 792 mph (1,275 km/h)

With twin rotating engines in wing-tip nacelles and two extra lift engines in the fuselage, Germany's V/STOL prototype was the first VTOL aircraft to fly supersonic, but it never entered production.

#### ▷ Hunting H126 1963

**Origin** UK

**Engine** 4,000 lb (1,814 kg) thrust  
Bristol Siddeley Orpheus BOr.3  
Mk805 turbojet

**Top speed** N/A

Built to test "blown flaps" or "jet flaps"—nozzles along the trailing edges of the wings that took 50 percent of the engine's exhaust (wing-tip thrusters took another 10 percent, the H126 could take off at just 32 mph (51 km/h).

#### △ BAC 221 1964

**Origin** UK

**Engine** 11,000 lb (4,990 kg) thrust Rolls-Royce  
Avon RA.28 afterburning turbojet

**Top speed** 1,061 mph (1,708 km/h)

BAC rebuilt the prototype Fairey Delta (a 1950s supersonic research aircraft, first to reach 1,000 mph/1,609 km/h) with ogee-ogee wing form and other details to provide research data for Concorde.

#### ▷ Custer CCW-5 Channel Wing 1964

**Origin** US

**Engine** 2 x 260 hp Continental IO-470P  
air-cooled flat-6

**Top speed** 220 mph (354 km/h)

Custer built two CCW-5s with "channel wings" around the engines, for low speed flight and very short takeoff—one in 1955 and this one in 1964. Claimed to fly at 11mph (18 km/h), its top speed was low, too.

#### ◁ Dassault Mirage G 1967

**Origin** France

**Engine** Pratt & Whitney/Snecma  
TF 306 turbofan

**Top speed** 1,599 mph (2,573 km/h)

This swing-wing prototype for the French Air Force flew successfully for four years before being lost in an accident. It was never developed for production, although two related prototypes were built.
