

Bell 206 JetRanger

Designed in the mid-1960s for the commercial market, the stylish JetRanger became an immediate success with corporate operators and military customers alike. Between 1967 and 2017, more than 7,500 were built by Bell Helicopter in the US and under license by the Agusta company in Italy.

THE ORIGINS of the JetRanger date back to a 1962 US Army competition to design a Light Observation Helicopter. Bell Helicopter entered its Model 206/OH-4 design, which introduced an Allison T-63 turboshaft, one of the first turbine engines to be modified for a helicopter. Bell lost the competition but adapted the design to a more commercial specification. The result, the JetRanger, emerged in 1965.

The JetRanger featured a more streamlined and attractive airframe, a much improved internal layout, and a more powerful Allison 250 series engine. It was the first light helicopter with a turbine engine to be designed from the outset for the civil market, and demand soon outstripped production. In response, Bell granted a license to Agusta in Italy to build JetRangers for both civil and military customers in Europe and the Middle East, and production began in 1967. Over its more than 40-year production run, the JetRanger was upgraded several times, receiving more powerful engines, and it remains in widespread use today.

SPECIFICATIONS			
Model	Agusta-Bell AB206C-1 JetRanger, 1974	Rotor diameter	33 ft 4 in (10.16 m)
Origin	US/Italy	Length	39 ft (11.91 m)
Production	7,700	Engines	420 shp Allison 250-C20 turboshaft
Construction	Aluminum and steel	Range	418 miles (673 km)
Maximum weight	3,198 lb (1,451 kg)	Top speed	137 mph (220 km/h)
