

THE COCKPIT

The MiG-29 cockpit lacked the “glass” electronics carried by the US F/A-18 Hornet; instead, the displays were traditional analog dials. The exception to this was the pilot’s Shchel-3UM Helmet Mounted Display (HMD). The main control column was centrally mounted, and did not include Hands On Throttle-and-Stick technology. The cockpit was spacious with good visibility (by Soviet standards). This particular example is an early 9.12 model MiG-29 operated by the Ukrainian air force. The latest member of the family, the MiG-35, has replaced analog instruments and has three large multi-functional displays (and four in the rear cockpit of the two-seat MiG-35D).
